

Materials Testing

Our UKAS Accredited laboratory deliver high quality testing services and advice associated with the natural and built environments. We are able to establish whether a material is compliant with a particular project specification, industry standards and current legislation.

Our testing capacity ranges from simple soil testing to full compliance and/or approval testing; laboratory technicians and engineers are trained and audited to undertake a comprehensive range of material testing and inspections.

Operating to UKAS and ISO 9001:2008 procedures and test methods, Ian Farmer Associates provide information that enables our clients to make well informed cost and programme decisions.

Areas of testing include:

- [Concrete Testing](#)
- [In-Situ Testing](#)
- Earthworks
- Highways Specification (clauses 600, 700 and 800)

» [See more about our accreditation](#)

As an independent construction materials testing laboratory, we understand quality is vital. Ian Farmer Associates' scopes of sampling and testing methods are carried out in accordance with current British and European Standards.
